BOOKALOOK · SUPERADMIN · QA & TEST REPORT

Money in Pocket & Analytics Dashboard

Release tested: commit 40b1050 (“report page”) and follow-up fixes · Report date: 06 November 2026

1. Summary

This release adds a **“Money in pocket”** figure to the SuperAdmin dashboard and replaces the Platform Reporting page with a full **analytics dashboard** (8 tabs, date-range and city/area filters, comparison with the previous period, CSV export). Every behaviour listed in section 4 is covered by an automated test that was run for this report; the results below are taken directly from the test run log, not written by hand.

39/39	371	757	2
release test cases passed	individual checks (assertions) in those cases	tests passed in the full backend suite	failures — both pre-date this release (section 5)

Frontend: TypeScript type-check and ESLint both clean on all changed files.

2. What was delivered

Money in pocket

What BookALook actually holds right now, and how much of it is its own once everything it owes has gone out. It is a running position since launch (the dashboard’s date range does not change it). Clicking the card shows every line behind the number.

```
Cash held       = customer payments collected online (payment gateway only)
                + Subscription Plan payments approved (cash after coins)
                + commission dues paid in by salons
                − payouts already paid to salons
                − refunds already sent to customers
                − Razorpay fee (estimated, absorbed by BookALook)

Money in pocket = Cash held
                − payouts calculated or approved but not yet paid
                − advances held for bookings no payout has settled yet
                − refunds still on their way to customers

Shown but not counted until received: commission dues salons still owe, plan payments awaiting approval.
Never counted: cash/UPI customers pay at the salon counter — that is the salon’s money from the start.
```

Analytics dashboard (Platform Reporting)

- **Overview** — GMV, bookings, completed visits, average bill, customers, trading salons, online collections, BookALook earnings and take rate, payouts, refunds, cancellation and no-show rates; trends and highlights.

- **Money** — online vs at-salon collections, refunds by status/reason/salon, payouts by status and billing model, commission and plan earnings, payment mix (advance / full / nothing online), Razorpay fee estimate, money-in-pocket breakdown.
- **Bookings** — outcomes over time, app booking funnel, peak-time heatmap (weekday × hour), weekday averages, booking lead time, who cancels and why, reschedules.
- **Cities & areas** — city and area tables (GMV, growth, share, average bill, reliability, customers, online money), demand against supply by area.
- **Salons & teams** — full salon leaderboard (21 columns), fastest growing, most loyal, watch list, best rated, quiet salons, team utilisation per stylist.
- **Services** — categories, services (revenue, growth, discounts, ₹ per chair-hour), combos, first-time offers, counter add-ons.
- **Customers** — new vs returning, repeat rate, visit frequency, spend bands, 6-month cohort retention, gender mix, top customers with masked phone numbers, sign-ups and conversion.
- **Engagement** — reviews and rating trend, lowest-rated salons, complaints and resolution time, WhatsApp campaigns and messages, notifications, reward coins.

3. How it was tested

- **Automated feature tests** (39 cases, 371 checks) call the real API endpoints as a SuperAdmin against a test database, with data built for each case so every expected number is calculated by hand in advance.
- **Isolation** — each test runs inside a database transaction that is rolled back, and builds its own city, salons and customers, so tests cannot affect each other or real data.
- **Full regression run** — the whole backend suite (885 tests) was run to confirm nothing else broke.
- **Manual browser check** — every tab, the city/area filters and the money-in-pocket breakdown were opened in the browser against a demo marketplace (screenshots in section 6).
- **Frontend static checks** — TypeScript type-check and ESLint.
- **Production deployment** — deployed to the live server (PostgreSQL); the new endpoints were confirmed responding after deployment.

4. Edge cases and results

#	SCENARIO AND EXPECTED BEHAVIOUR	CHECKS	RESULT
Money in pocket			
1	The breakdown always adds up (in pocket = cash held − still owed) `test_cash_position_lines_always_add_up`	7	Pass
2	Cash and UPI taken at the salon counter is never counted `test_counter_payments_are_ignored`	4	Pass
3	Failed or abandoned gateway payments are never counted `test_unsuccessful_payments_are_ignored`	3	Pass
4	An upcoming booking's advance is held for the salon, not kept `test_upcoming_advance_is_owed_not_kept`	5	Pass
5	A partial refund on an unsettled booking leaves only the remainder owed `test_partial_refund_leaves_the_remainder_owed`	5	Pass
6	Failed refunds never left, so they are not counted anywhere `test_failed_refunds_are_ignored`	5	Pass
7	Pending, processing and awaiting-manual refunds all count as still owed `test_every_unfinished_refund_status_is_owed`	5	Pass
8	A refund on a booking already paid out to the salon comes out of cash held `test_late_refund_on_settled_booking`	5	Pass
9	Pending and approved payouts are owed; once distributed they are paid out `test_payout_moves_from_owed_to_paid`	6	Pass
10	Commission a salon still owes is shown but not counted until it pays `test_salon_owed_dues_count_only_once_paid`	8	Pass
11	Plan payments count the cash after coins; pending and rejected ones are not counted `test_plan_payments_cash_after_coins`	4	Pass
12	The Razorpay fee applies only to Razorpay money and follows the configured rate `test_gateway_fee_rate_and_scope`	6	Pass
13	Can go negative when more was paid out than was held, and says so `test_in_pocket_can_be_negative_relative_change`	3	Pass
14	Full worked example — settled, upcoming, refunded, queued, unpaid payout, dues paid and owed, plan payments, counter cash — every line and the final figure match the hand calculation `test_money_in_pocket_is_cash_held_less_what_is_still_owed_out`	17	Pass
Ranges			
15	A "from" date after the "to" date is swapped, not rejected `test_reversed_range_is_swapped`	4	Pass
16	Anything longer than two years is cut to the last two years `test_long_range_is_capped`	5	Pass

#	SCENARIO AND EXPECTED BEHAVIOUR	CHECKS	RESULT
17	With no dates the last 30 days are used, compared with the 30 before `test_default_range`	6	Pass
18	A single day is compared with the day before `test_single_day_range`	5	Pass
19	Daily grouping over more than six months switches to weekly `test_daily_over_long_range_becomes_weekly`	3	Pass
20	Monthly buckets cover short months and month ends (31 Jan → 1 Mar) `test_monthly_buckets_across_february`	3	Pass
21	A malformed date or grouping is rejected with a clear validation error `test_bad_input_is_rejected`	6	Pass
Filters			
22	A city with no salons returns zeros on every tab, never an error `test_empty_city_returns_zeros_everywhere`	30	Pass
23	An unknown city returns zeros; a city or area id that is not a valid id (including SQL-looking text) is refused with 422 `test_unknown_or_hostile_city_id`	23	Pass
24	The area filter keeps only salons in that area; salons without an area show as "No area set" `test_area_filter_and_unassigned_salons`	8	Pass
Bookings			
25	Unpaid checkouts and holds the system cancelled are not bookings; they show as abandoned `test_abandoned_checkouts_are_not_bookings`	6	Pass
26	Walk-ins count in GMV but not as app customers or in the app booking funnel `test_walk_ins`	11	Pass
27	A completed visit without a final bill falls back to the booked total `test_gmv_falls_back_to_total`	3	Pass
28	Completion rate ignores visits that have not happened yet `test_completion_rate_ignores_upcoming`	5	Pass
Totals			
29	GMV is the same on the headline, the trend, the city table, the area table and the salon leaderboard `test_totals_agree_across_views`	11	Pass
30	Service and category revenue agree, and discounts are the original price less the price paid `test_catalog_totals_agree`	8	Pass
31	Growth is blank (not 100% or infinite) when the previous period had nothing `test_growth_without_previous_period`	4	Pass
Customers			
32	Someone who visited before the range is returning; a cancelled visit never makes anyone "new" `test_new_versus_returning`	5	Pass

#	SCENARIO AND EXPECTED BEHAVIOUR	CHECKS	RESULT
33	Phone numbers in the top-customers list are masked to the last four digits `test_top_customer_phone_is_masked`	4	Pass
Teams			
34	Utilisation uses each member's hours, skips weekly offs and approved leave, and ignores cancelled bookings `test_provider_utilisation`	7	Pass
Engagement			
35	Only reviews written in the range count, and "lowest rated" needs three reviews `test_reviews_in_range_and_minimum_for_lowest`	5	Pass
Access			
36	Signed-out visitors get 401 and salon owners get 403 on every report endpoint `test_access_control`	20	Pass
37	Only SuperAdmin can open the cash position and analytics; an unknown report section is 404 `test_only_superadmin_sees_the_cash_position_and_analytics`	3	Pass
End to end			
38	A small city with two salons, three customers and two months of activity — every tab (overview, money, bookings, places, salons, customers, engagement, filter options) returns the hand-calculated figures `test_analytics_sections_add_up_inside_a_city`	74	Pass
39	Every tab answers across all data with weekly and monthly grouping, and the comparison period is the same length just before `test_every_section_answers_unfiltered_with_weekly_and_monthly_buckets`	29	Pass

Issue found and fixed during testing

A city or area filter value that is not a valid id (for example text that looks like SQL) would have caused a server error on the production database. The filters now validate the id and return a clear “invalid value” response (case “Filters: … refused with 422”). Also adjusted: when the previous period has no data, rate changes now show “new” instead of a misleading percentage-point jump.

5. Full backend suite

TESTS RUN	885
PASSED	757
FAILED	2 (both existed before this release and are unrelated to it)
SKIPPED	126 — these need a pre-loaded demo marketplace or a PostgreSQL server and skip themselves on an empty SQLite test database; none of them touch reports or money in pocket
DURATION	46 s

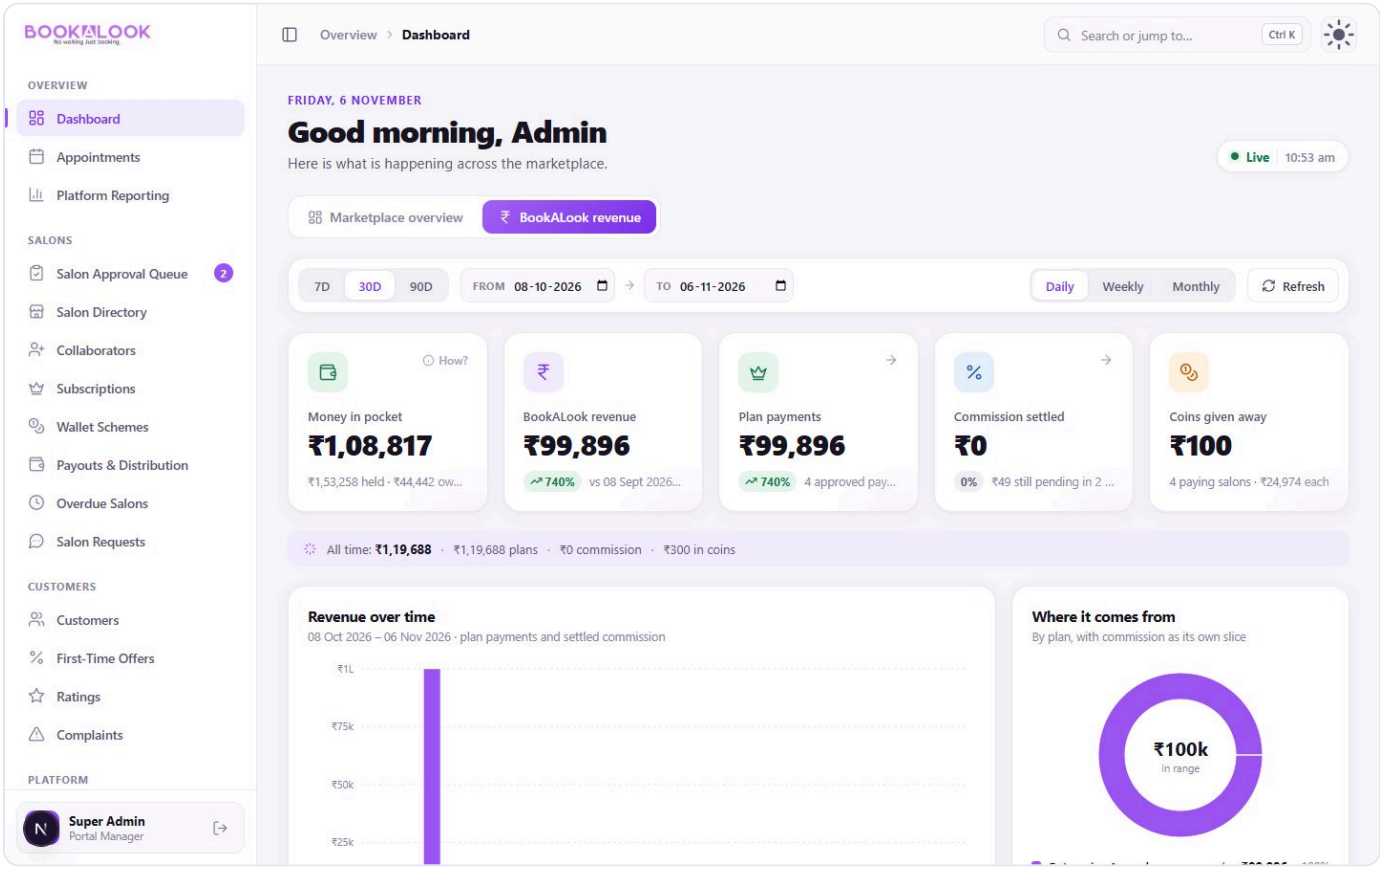

Pre-existing failures (not part of this release)

TEST	FAILURE
SalonRegistrationAndReviewTest › test_registration_saves_commercial_preferences_and_cover_photo	Failed asserting that null matches expected 'a3287990-584f-4ad4-9bd6-933da8465953'.
WhatsAppOutboxTest › test_every_message_carries_the_placeholders_its_template_expects	all four events should reach the outbox

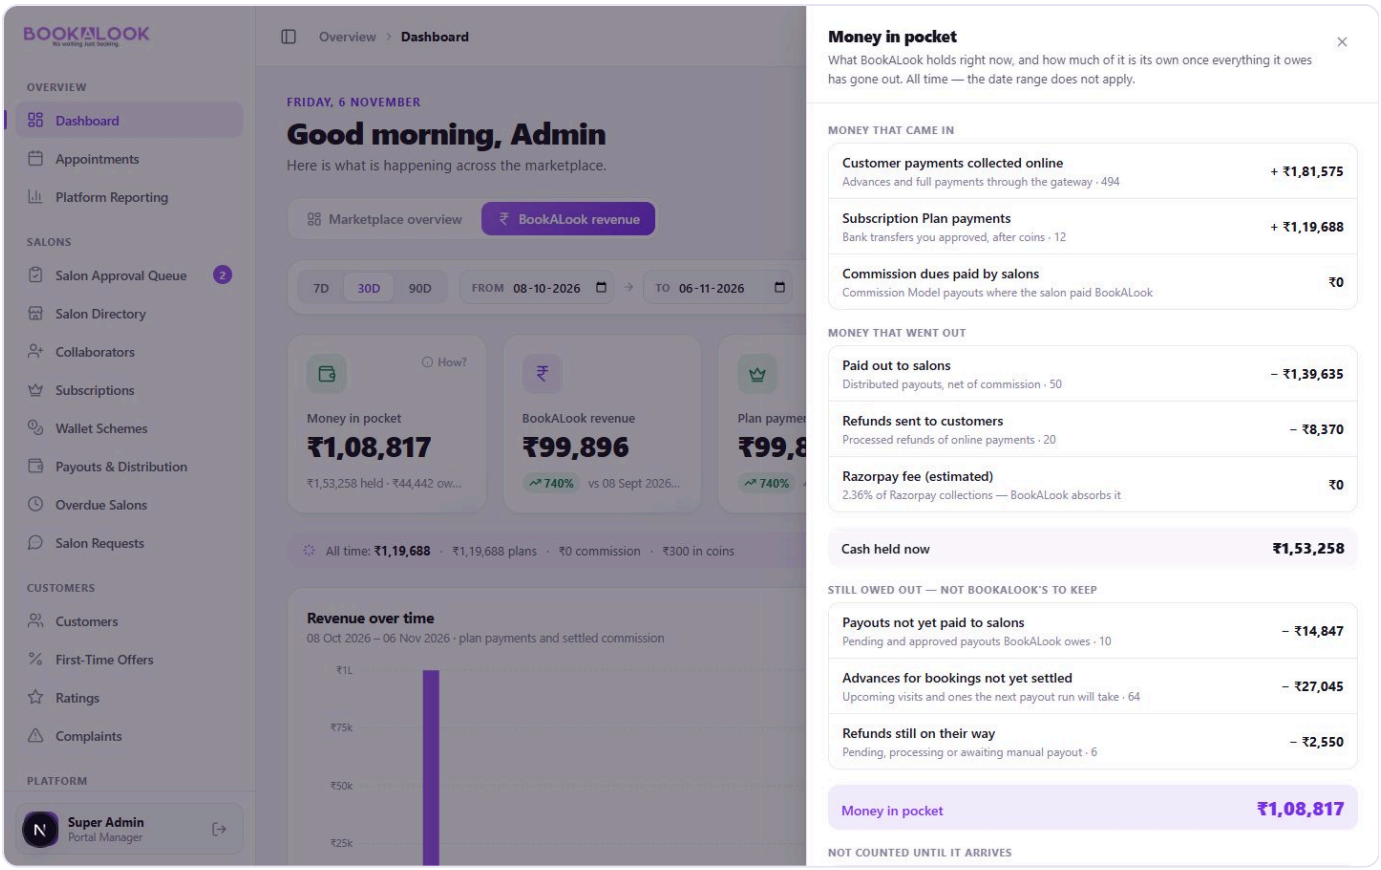

These two tests (salon registration with cover photo; WhatsApp outbox placeholders) were already failing before this work began and are tracked separately.

6. Screenshots

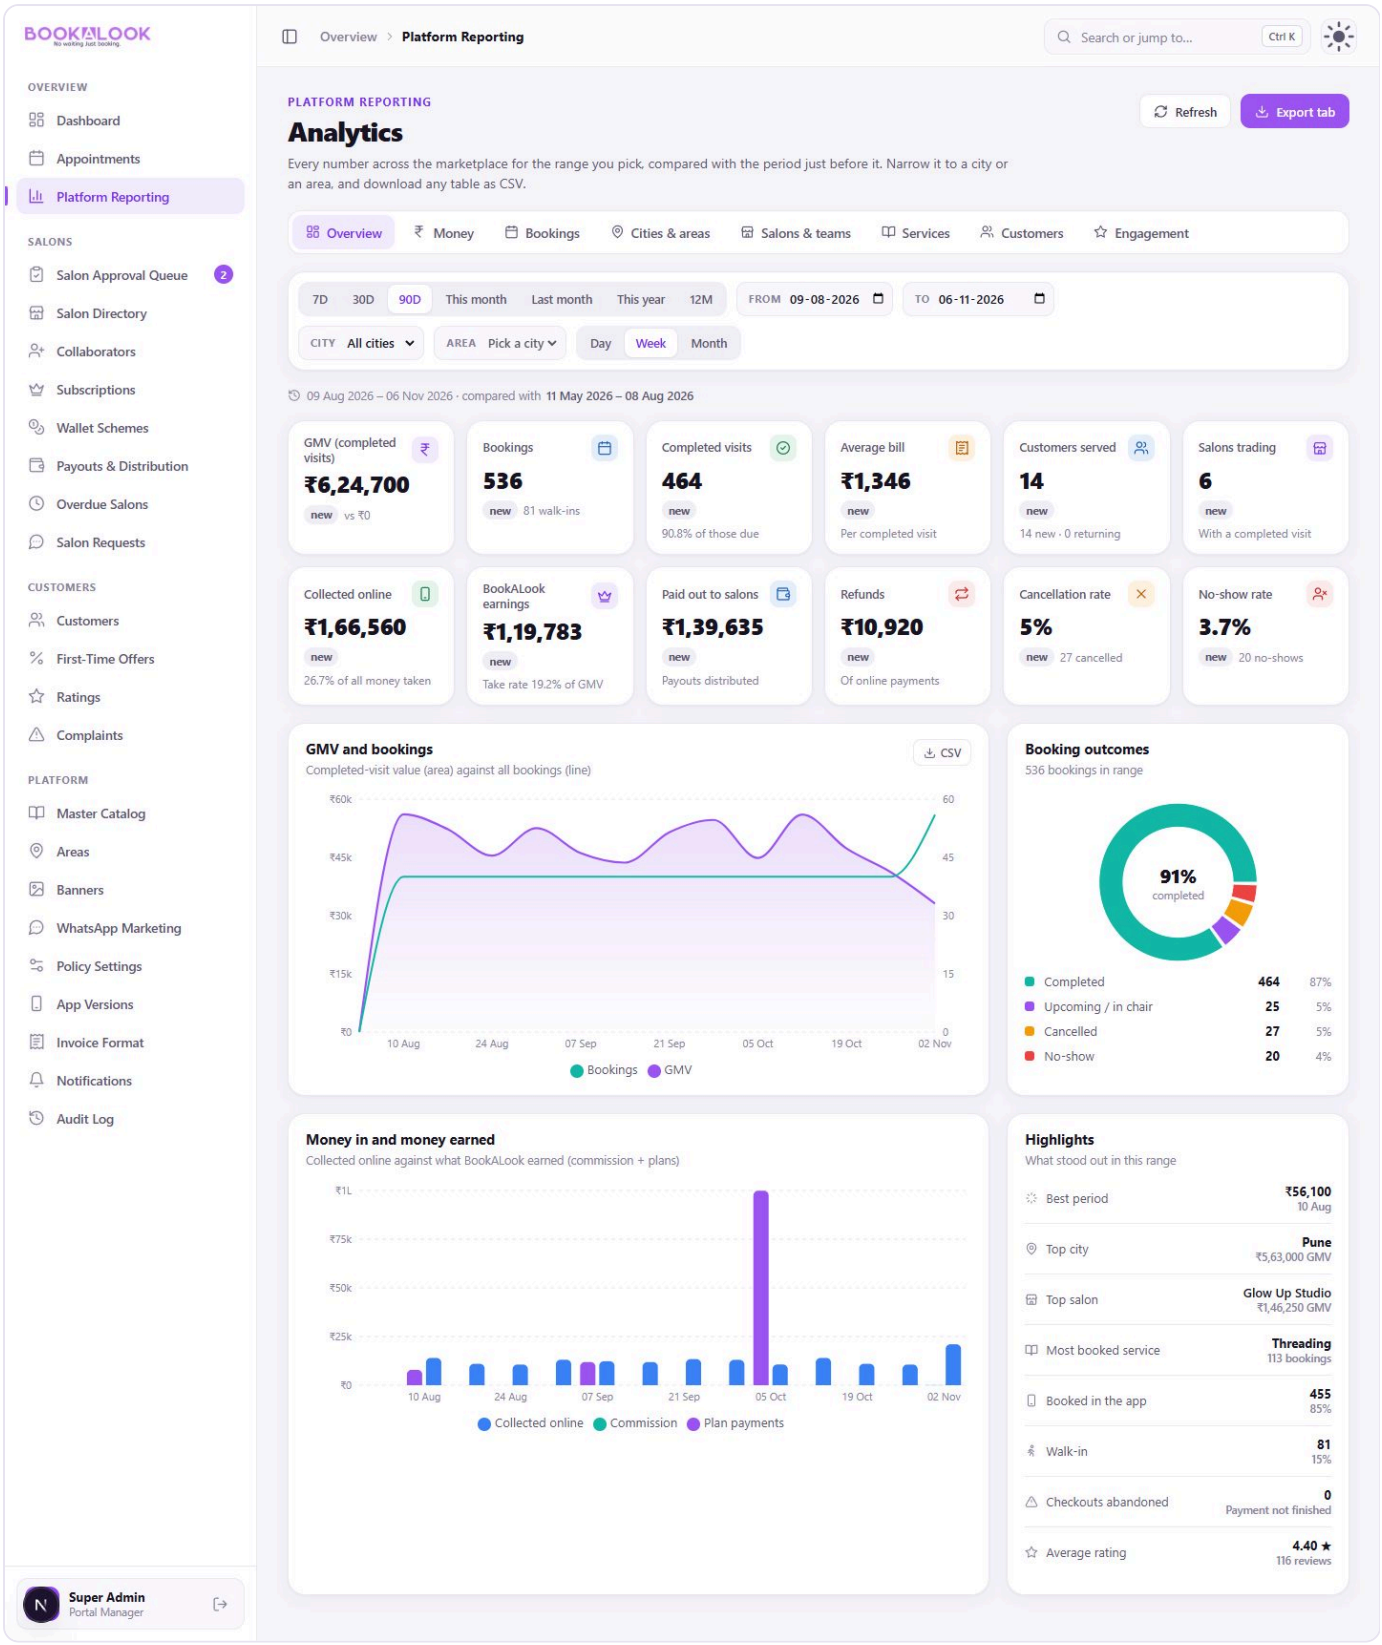

Taken from the SuperAdmin portal running against a demo marketplace (sample salons, customers and bookings), last 90 days.

Dashboard → BookALook revenue: the new “Money in pocket” card (first card).

Clicking the card opens the line-by-line breakdown: money in, money out, cash held, still owed, money in pocket.

Reports → Overview: twelve headline figures with change against the previous period, trends and highlights.

09 Aug 2026 – 06 Nov 2026 · compared with 11 May 2026 – 08 Aug 2026

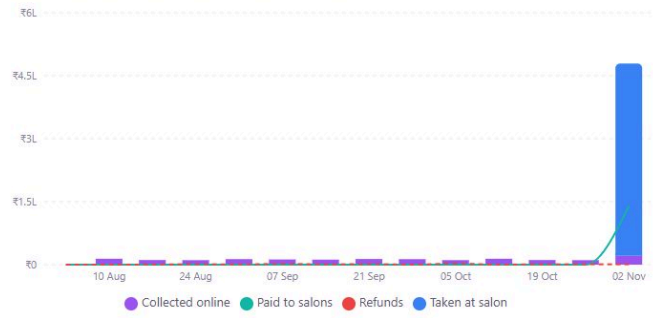

Collected online	Taken at the salon	Refunds	Paid out to salons	Commission dues paid in
₹1,66,560	₹4,57,945	₹10,920	₹1,39,635	₹0
new 455 payments	new Cash and UPI — the salon keeps it	new 6.6% of online · ₹2,550 still queued	new Distributed in range	0% Commission Model salons paying BookALook

Commission earned	Plan payments	BookALook earnings	Coins against commission	Razorpay fee (est.)
₹95	₹1,19,688	₹1,19,783	₹0	₹0
new On visits in range, as calculated in payouts	new Approved in range, after coins	new Commission + plans	0% Given back on settled payouts	0% 2.36% of Razorpay collections

Money movement over time

Online and at-salon collections (bars) with refunds and payouts (lines)

CSV

Money in pocket — right now

All time, whatever the range or city above

MONEY THAT CAME IN

Customer payments collected online Advances and full payments through the gateway · 494	+ ₹1,81,575
Subscription Plan payments Bank transfers you approved, after coins · 12	+ ₹1,19,688
Commission dues paid by salons Commission Model payouts where the salon paid BookALook	₹0

MONEY THAT WENT OUT

Paid out to salons Distributed payouts, net of commission · 50	− ₹1,39,635
Refunds sent to customers Processed refunds of online payments · 20	− ₹8,370
Razorpay fee (estimated) 2.36% of Razorpay collections — BookALook absorbs it	₹0

Cash held now ₹1,53,258

STILL OWED OUT — NOT BOOKALOOK'S TO KEEP

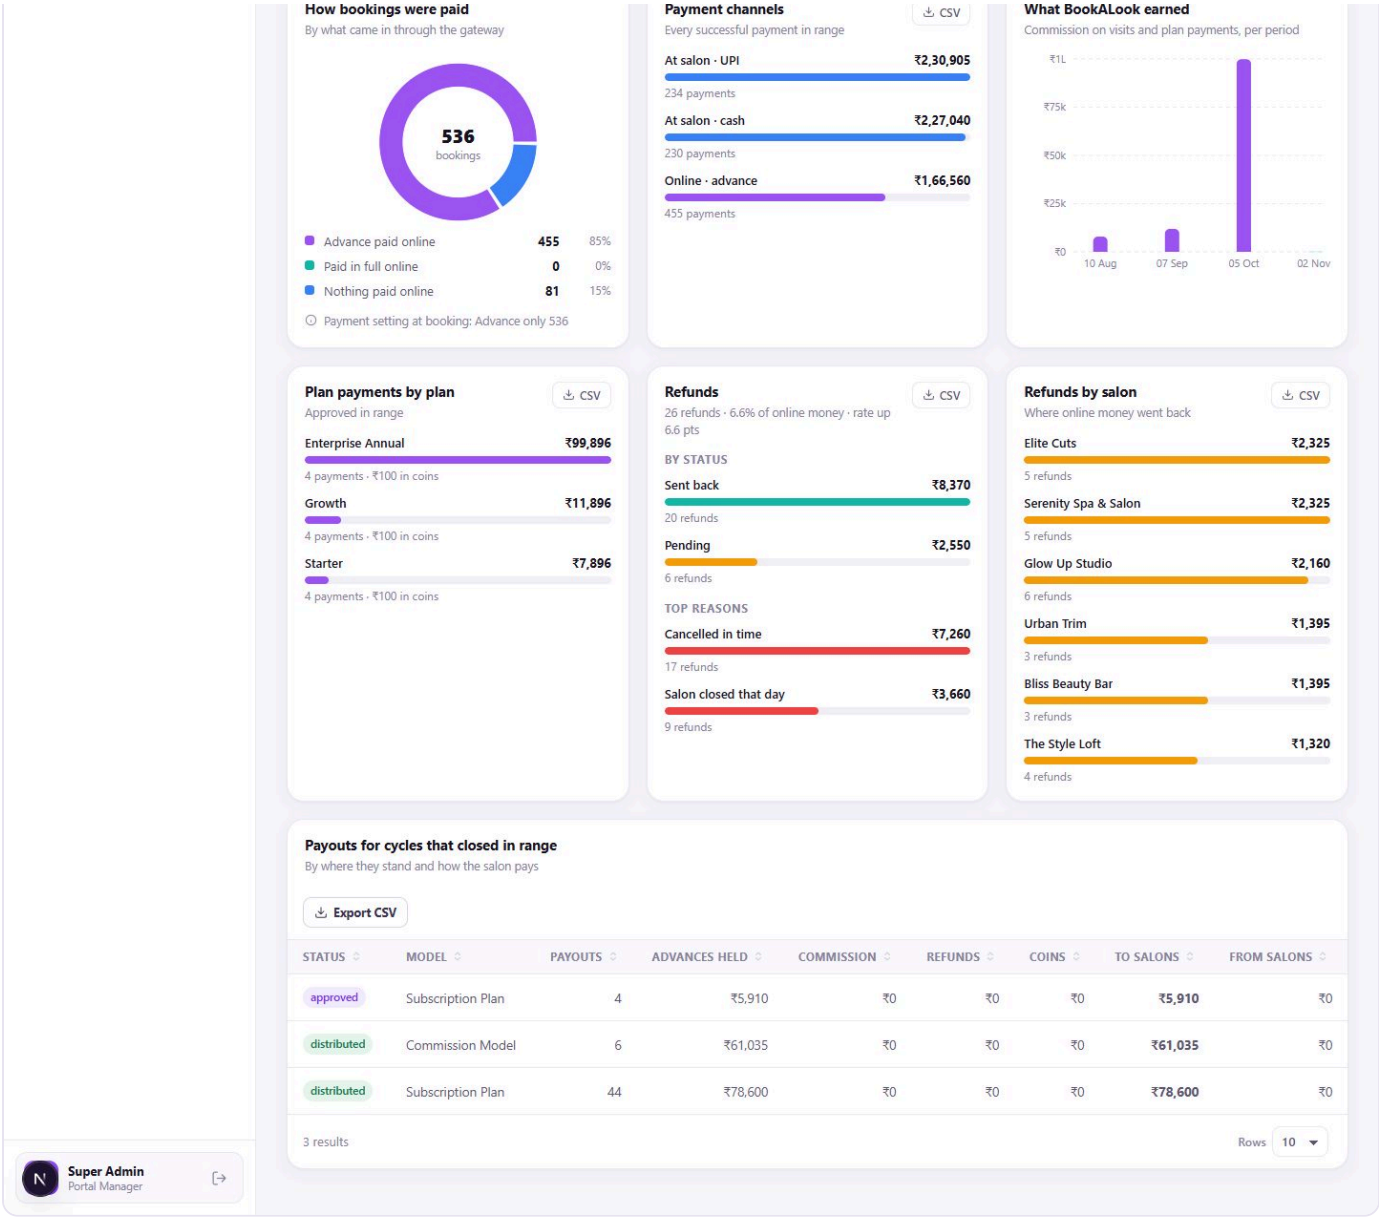

Payouts not yet paid to salons Pending and approved payouts BookALook owes · 10	− ₹14,847
Advances for bookings not yet settled Upcoming visits and ones the next payout run will take · 64	− ₹27,045
Refunds still on their way Pending, processing or awaiting manual payout · 6	− ₹2,550

Money in pocket ₹1,08,817

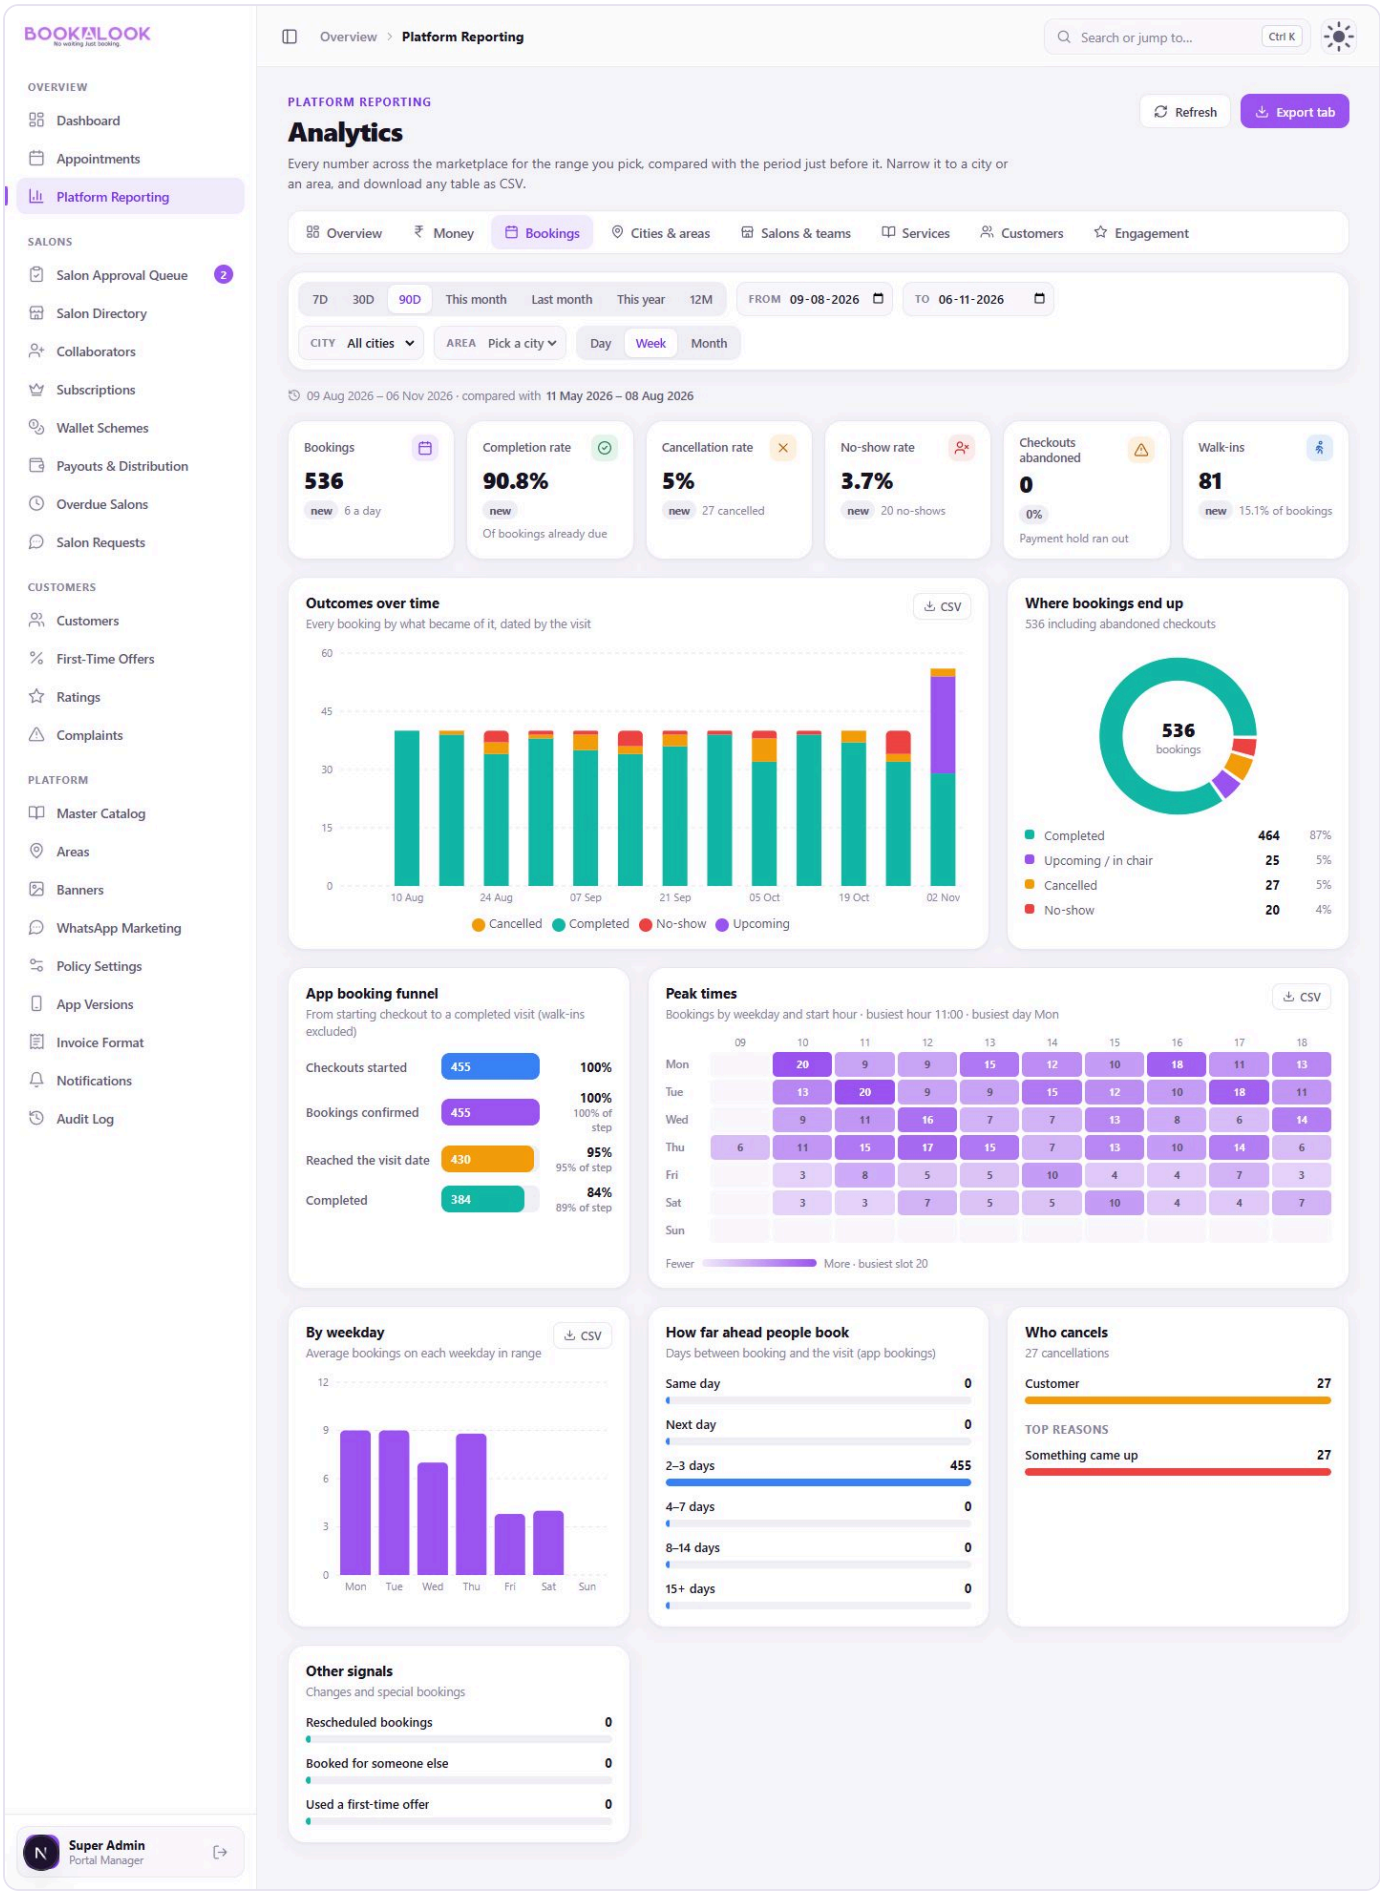

NOT COUNTED UNTIL IT ARRIVES

Commission dues salons still owe Counted once the salon pays	₹0
Plan payments awaiting your check Counted once you approve them · 1	₹1,999

Only money that passed through the payment gateway counts — what customers pay at the counter is the salon's from the start. Razorpay does not report its fee per payment, so it is estimated at 2.36% of Razorpay collections.

Reports → Money: collections, refunds, payouts, earnings, payment mix and the money-in-pocket breakdown.

Reports → Bookings: outcomes over time, funnel, peak-time heatmap, lead time and cancellations.

Reports → Engagement: reviews, complaints, campaigns, WhatsApp, notifications and coins.

City and area filter applied (Pune · Baner): every figure narrows to that area.

7. Known limits

- **Razorpay fee is an estimate.** Razorpay does not report its fee per payment to the platform, so it is estimated at 2.36% (2% + 18% GST) of Razorpay collections. The rate can be changed in configuration

(RAZORPAY_FEE_PERCENT).

- **Money in pocket is a position, not a period.** It is calculated since launch and does not follow the dashboard's date range.
- **Money paid at the salon counter** is never part of BookALook's money; it is shown in reports for completeness only.
- **Team utilisation** uses each stylist's weekly working hours less approved full-day leave; part-day leave and salon closures are not deducted.
- **Ranges longer than two years** are cut to the most recent two years to keep the dashboard fast.
